ABOUT THE COPESE GROUP

The Copese Group was born in 1976 initially as a livestock sales project and is nowadays one of the main producers of fresh meats, sausages and smoked meats in Spain.

The success of Copese lays primarily in the quality of its products - achieving annual sales figures of more than 200 000 hams - and is also a reference for their monitoring of the production processes of all business areas, from genetics to animal breeding, in fresh and processed products alike. All these processes make up what is known as Integrated Production processes, helping the company face all their quality and traceability challenges, based on agricultural best practices with a rational management

of natural resources and promoting the use of natural regulation mechanisms instead of production factors.

The Copese Group is the holder of the ERESMA brand, which lends its name to the fresh and processed products that come from the company's production center.

BUSINESS SECTOR

- ✔ Agri-food industry

1 MAIN NEEDS

Before implementing the Valuekeep solution, the Copese Group did not work with any maintenance management software, using instead paper and Excel spreadsheets to manage and store their history of maintenance operations.

The main goal of Copese was to find a solution that provided support for all the management processes of their several creation and production localizations, such as the slaughterhouses, stables, cutting and packaging rooms. This led to the adoption of a maintenance management software that could handle their 250 assets, 118 locations, 2 warehouses and the Copese Group work center.

The Copese Group needed an agile and easy-to-use tool for reporting incidents, which was previously a manual process with high risk of failure and delay."

DAVID PERIBAÑEZ

MAINTENANCE MANAGER

Along with these needs, there was also a lack of a solution that could establish preventive maintenance plans and optimize the availability of production equipment to ensure the quality of the final product.

The Group also faced the total absence of a system where they could store digital copies of the documentation for all their equipment, such as user guides and warranty/inspection certificates. All these indicators pointed to the need for implementing a maintenance management software solution. For David Peribañez, maintenance manager of the Copese Group, the quality of the final product is closely linked to the good operating conditions of the equipment. And ensuring this requires a tool that can manage all maintenance plans: which is where the Valuekeep solution plays a vital role.

2 REASONS FOR CHOOSING VALUEKEEP

The Copese Group needed to centralize all their information into a single platform in order to organize and facilitate all of the company's maintenance processes. Both the equipment downtime and the money spent on repairs are detrimental to any business and, for this reason, the Copese Group decided it was essential to have a management tool could help control these problems.

They ended up choosing Valuekeep software because it included several unique features that answered the challenges that the company was facing. Some of these features were the ability to manage a cost center and 2 warehouses, the Group's 250 assets and 118 locations, as well as viewing work orders and reporting labor from anywhere, using a mobile device.

Valuekeep was the solution that provided us with the best guarantee of an efficient management of all maintenance tasks in our different creation and production spaces."

DAVID PERIBAÑEZ

COORDINADOR DE MANTENIMIENTO

The Valuekeep maintenance management solution features a simple and intuitive design with a high level of accessibility that also proved a decisive factor for choosing this software. David Peribañez adds that this decision was also based on a feature that allows technicians to create issues in work sections using a smartphone or tablet with the Valuekeep Mobile app.

This set of reasons drove the company to the decision of improving the quality and ease of access to information, reducing maintenance operation costs, increasing productivity and, also very important, eliminating the use of paper by implementing the Valuekeep solution.

3 IMPLEMENTATION OF THE SOLUTION

Implementation of the Valuekeep maintenance management solution and the Valuekeep Mobile app.

4 MAIN IMPROVEMENTS EXPERIENCED IN THE ORGANIZATION

After implementing the Valuekeep solution, everything flows automatically, without losing time or information. The Copese Group managed to equip their maintenance department with essential features to simplify their daily operations.

Among other benefits, the company significantly reduced the amount of time needed to assign and organize work orders because now they “have a system that centralizes all the information, streamlining the entire maintenance process”, reports David Peribañez.

Copese also achieved the complete elimination of paper use in the process of maintenance management. Communication between the maintenance teams became significantly easier too, using the two-way communication system of the Valuekeep Mobile app.

From a strategic viewpoint, Valuekeep software also improved the business' agility because, for example, it allows reporting work orders in real time, giving the maintenance manager an overview of his technicians' availability, and data on the time spent for each maintenance activity.

- ✓ Elimination of paper use in the entire maintenance management cycle
- ✓ Reduction of time spent designing and updating technician schedules
- ✓ Quick access to reliable information for optimizing decision making
- ✓ Reduction of time taken to answer incidents
- ✓ Equipment productivity and operability increase
- ✓ Centralization of all intervention requests into a single platform
- ✓ Tracking the state of interventions in real time
- ✓ Quick report of all work performed on the field
- ✓ Better monitorization of the work of technical teams
- ✓ Safer working environment with follow-up of the most critical work orders
- ✓ Ability to close tasks using mobile devices, without wasting paper

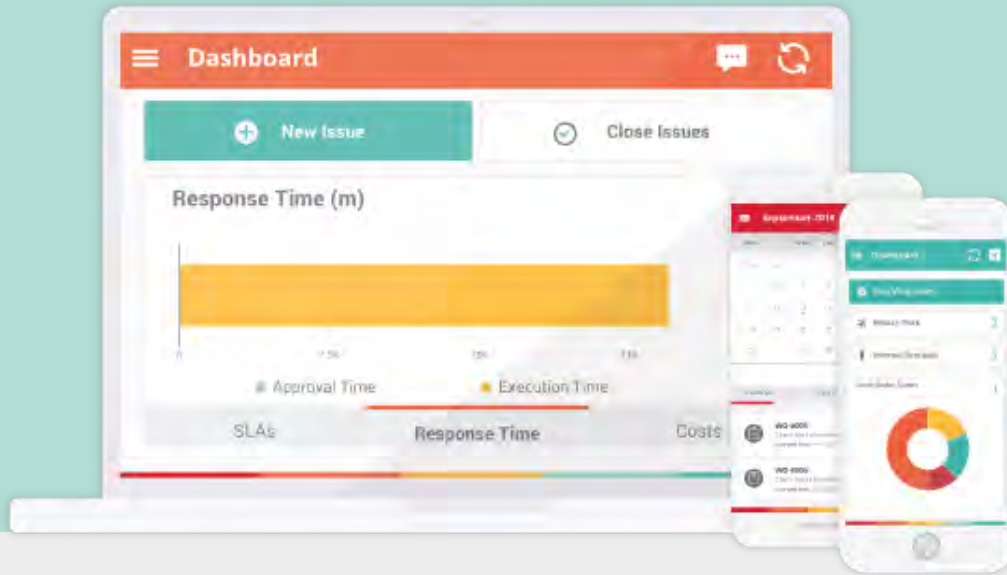

With Valuekeep, processes are quick and we improved the time taken for answering incidents, providing us with an overview of all inventory and maintenance jobs.”
